GO MOBILE APPLICATION

## System-Wide Remote Video Management with Convenience

The victor Go mobile app connects to a central application server, allowing it to be a part of the entire surveillance ecosystem. As a result, users can see all or most connected network video recorders, inherit permissions and see system events and alarms from a mobile device. Save and push content, such as still images, to other app users instantly to streamline event response while away from the command center. Features available in the full victor Video Management System are still available at your fingertips, such as Smart Search, PTZ camera control, and live video retrieval.

Save time by simply logging in to the app from an Apple or Android device to manage an incident or monitor a security operation remotely. The 64-bit video surveillance app is designed to provide the right video quality for a mobile device with minimal delay.

### FEATURES THAT MAKE A DIFFERENCE

- EFFICIENTLY MONITOR ALARMS AND EVENTS REMOTELY
- VIEW LIVE EVENTS ON-DEMAND IN MULTIPLE PANE LAYOUTS OR FIXED VIEWS
- QUICKLY NAVIGATE RECORDED VIDEO TO A SPECIFIC TIME FOR FORENSIC INVESTIGATION
- DUAL-PHASE ACKNOWLEDGEMENT SUPPORT VIA APPLICATION SERVER
- INSTANTLY CONTROL PTZ CAMERAS WITH INTUITIVE ACTIONS STANDARD TO SMART DEVICES
- STREAM RECORDED AND LIVE VIDEO WITH MINIMAL LAG TIME
