

SwiftBeverage™ Series

Designed as a cost-effective, high performance system for maximum water confidence

The SwiftBeverage series offers maximum water disinfection performance, advanced control functionality and high flexibility for system configuration. It gives users peace of mind by providing a reliable, cost-effective and high performance system.

Vertical:

Food & Beverage, Pharma

Application:

Bioassay Validated Disinfection

Flow range:

106-832 (24-189) GPM (m³/hr)

Features and Benefits

Proven performance – full bioassay validation.

186 mJ/cm² UV doses meets the stringent, internationally-recognized USEPA standard – having undergone comprehensive validation at a wide range of flow rates and UV transmittance levels.

Assurance of NSF 61 compliance. NSF/ANSI 61: Drinking Water System Components – Health Effects ensure the raw materials are safe and have been properly tested against radionuclides and other naturally occurring volatile organic compounds.

Guaranteed performance and comprehensive warranty.

Our systems include a Lifetime Performance Guarantee* and comprehensive protection for your investment.

Low operation and maintenance cost. Low pressure high output Amalgam lamps save up to 62% power cost and request much lower maintenance.

Compact footprint for installation flexibility. Can handle maximum flow capacity in minimal space. Its compact design allows it to be installed vertically or horizontally in restrictive spaces, thereby lowering installation costs.

Advanced Digital Control. Robust and user friendly Microprocessor-based controller provides rich real time control information and various communication interfaces.

Local service. Global support. Our comprehensive network of certified service providers offers ongoing maintenance programs and fast response for service and spare parts.

* Life Time Performance Warranty will only applicable with the use of genuine OEM replacement parts.

SwiftBeverage™ Series

UV Sensor

Highly accurate, DVGW-approved, photodiode sensor monitors UV output within the chamber. Mounted within the sensor port on the side wall for easy access.

Amalgam Lamps

Utilizes high-output amalgam lamps. Each is located within its own protective quartz sleeve and supported by a removable, sleeve holder assembly. Designed for easy lamp replacement.

UV Chamber

Type 316L stainless steel. Chamber configurations are available with multiple inlet/outlet diameters.

Sleeve Wiping System

Optional automatic systems available; operate online, without interrupting disinfection. Fluorocarbon wipers are mounted in stainless steel yoke around the quartz sleeve of each lamp. The automatic system allows cleaning at preset intervals using a motor-driven wiper assembly.

Control Panel (CP)

Control cabinet is designed for indoor, wall-mount installation. Houses a microprocessor-based controller with input/output (I/O) connection points, and electronic power supplies. Distributes power to the UV chamber as well as the UV sensor and optional automatic wiping system. UV intensity, lamp elapsed time and lamp status are continuously monitored and displayed on the operator interface, located on the control panel door.

Remote Monitoring & Control

Robust microprocessor-based controller provides standard I/O signals for on/off control from a remote location. Programmable digital and analog I/O capabilities can generate unique alarms for individual applications, and send signals to operate valves and pumps. All units feature optional SCADA communication via Modbus, Modbus TCP/IP, EtherNet/IP and PROFINET.

Industry-Leading Bioassay Validations

Validation testing to world standards ensures regulatory compliance regardless of location

- Validated in accordance with USEPA 2006 Guidance Manual
- Use of multiple surrogate organisms (T1, T7 and MS2) allows tailoring of UV dose to that of the target organism (e.g. *Cryptosporidium*)
- Intensity Setpoint or Calculated Dose control options
- Validations performed under worst-case hydraulics – with a 90° elbow at the inlet

Validated Pasteurized Milk Ordinance (PMO) UV Solution for Dairy Industry

Configurable system solution to fully meet PMO requirements

- 3rd party validated UV disinfection system provides extra guarantee to disinfection performance
- Intuitive system provides at-a glance system status and allows remote operation
- High system stability and low maintenance requirement

* This product contains additional options. See Aquafine or an Authorized Distributor for details. Images shown for illustration purposes only.

Cost efficient, High-Output Amalgam Lamps

Low Pressure Amalgam lamps provides you high performance, low energy consumption and low maintenance requirement

- Only need to replace lamps once a year - saves customer about 25% in lamp costs and reduces system downtime
- Saves customer up to 62% in electricity fees.
- Low request for lamp and chamber clean ups - saves customer labor fees and reduces system downtime
- Tolerate low flow or no flow - do not need additional cooling system

SWIFTBEVERAGE™ SERIES // HIGH PERFORMANCE UV SYSTEMS

Model: SwiftBeverage	SBV300	SBV600	SBV1200	SBV1800
MAXIMUM FLOW RATE

Guaranteed Performance and Support Services

All of our systems come with a lifetime performance warranty. Global customer support is available from our Authorized Distributor Network and from our 24/7 Technical Service Group.

For questions regarding your application needs, please contact your local Authorized Distributor or Aquafine for more information.

Aquafine is an ISO 9001:2008 certified company. Aquafine equipment performance is guaranteed with the use of genuine OEM replacement parts.
