

Lifejacket Lights

Daniamant design and manufacture all of our products in line with the relevant worldwide approvals, technical specifications, current legislation and International directives.

Our mission is to achieve World class performance through partnerships with our suppliers, customers and employees, providing products and services that enhance the safety and security of our customers.

Daniamant products cover 11 key areas:

- Lifejacket Lights
- Liferaft Lights
- Lifebuoy Lights
- Intrinsically Safe Lights
 - Special Lights
 - LED Flares
- Bridge Navigational Watch Alarm System (BNWAS)
 - Salinometers
 - Oil Level Alarm
- Electronic Inclinator
- Agency for a range of world-renowned safety product brands (supplied to the Danish market)

Dan M2

The light is a single compact flashing unit. It is manually activated by rotation of the light dome. Easily fitted with two different backing plates, one to go over a thin strap and one to go over a 5cm belt.

Dan MR2

MR2 is the recessed version of the Dan M2. This light has a special fitting clip, designed for attachment to a lifejacket so that only the dome is above the fabric on the jacket. The light is specially designed for lifejackets used on passenger vessels with evacuation or chute systems for mass evacuation of passengers.

Dan W2

This is the automatic version of Dan M2. The light activates automatically when in water and can be turned off manually if required. The light has the same attachment arrangement as the Dan M2.

Dan WR2

WR2 is the recessed version of the Dan W2. This light has a special fitting clip, designed for attachment to a lifejacket so that only the dome is above the fabric on the jacket. The light is specially designed for lifejackets used on passenger vessels with evacuation or chute systems for mass evacuation of passengers.

L7A2

The unique L7A2 now replaces the well-established L7A. The design is similar, however the L7A2 is around half the length of the earlier light. The L7A2 can be supplied with a new, shorter receptacle for permanent mounting into the foam material of the inherently buoyant lifejacket, or it can be retrofitted into the existing L7A receptacle.

L6

The L6 is a small, compact and robust flashing Lifejacket light fully meeting the latest stringent IMO SOLAS requirements. The L6 is a manually activated, one piece light. It is operated by a simple pull ring that is easy to use even with gloved hands or in adverse conditions.

L6A

The L6A is very similar to the manual L6, but it is an automatically activated light. It uses a lead to ensure the light comes on in the water and that lead allows the light to be switched off if required.

The L6, L6A and L7A2 all utilise the latest electronic circuitry that ensures the light flashes at between 50 -70 times per minute. The L6 and the L6A are both supplied with a unique mounting clip to assist easy fixing to a wide range of lifejackets.

Please note that intrinsically safe versions of the L6 and L6A are now available. These new Lights are known as L6-Ex and L6A-Ex and full details can be found in the intrinsically safe section of our web site
