

Features

- Fast Response to Input Signal changes results in faster loop control and savings in process materials.
- Integrated Volume Booster Output meets input requirements of final control elements requiring a higher capacity output signal and/or increased output pressure.
- Six Input Signal Ranges meet most process and machine requirements.
- Negative Bias Option allows zero pressure based operation.
- Five Booster Ratios meet industrial equipment requirements for higher output pressure ranges.
- Temperature Compensation provides stable operation under environmental changes.
- Vibration Resistance maintains set points under adverse vibration conditions.
- Various Mounting Configurations allow installation flexibility for most applications.
- NEMA 3R or optional NEMA 4X Enclosure for outdoor and indoor installations.
- Conduit Port for convenient wiring.

Operating Principles

The T5220 Transducer is an electro-pneumatic device that converts a DC current or voltage input signal to a proportional pneumatic output. This device is made up of three sections, the Signal Conversion Section, the Pneumatic Section and Booster Section.

The Signal Conversion Section (PC Board) accepts a DC current or voltage. This signal is applied to a coil which creates a magnetic force that moves a Flexure Arm.

The Pneumatic Section operates as a force balance system. A Sapphire Ball floats inside a Nozzle and controls the output pressure by exhausting air supplied through an Orifice. This Sapphire Ball acts as a piston exerting a force which is balanced against the force transferred to the Flexure Arm by the Coil.

The Booster Section amplifies the output pressure of the transducer. At set point, the force due to transducer output pressure acting on the top of the Upper Diaphragm is balanced by the force due to booster output pressure acting on the underside of the Lower Diaphragm. Any imbalance results in actuation of the appropriate supply valve or exhaust valve to correct the output pressure.

Mounting Kits

2" Pipe Mounting Configuration
shown with Model TXPD5220

Mounting Kit 14140
Includes the following:
Mounting Plate • 2" Pipe Clamp
Support Bar • Two 1/4" Lockwashers
Two 1/4-20 x 5/8" Bolts • Two 3/8" Lockwashers
Two 3/8-16 Nuts • Two 3/8-16 x 1 1/2" Caps

NOTE:
For Outdoor Use, Mount In Upright Position. (cover up)

Mounting Kit 15268
Includes the following:
Mounting Bracket • Four 10-32 x 7/16" Screws

NOTE:
If Not Mounted In An Upright Position, Zero & Span Adjustments Must Be Re-Calibrated For Proper Output Range.

NOTE:
For Outdoor Use, Mount In Upright Position. (Cover up)

Mounting Kit 14596
Includes the following:
Mounting Bracket • Two Lockwashers
2" Pipe Clamp • Two 1/4-20 x 5/8" Bolts
Two 1/4-20 x 1/2" Screws

¹ Standard unit is configured for common supply to transducer and booster.

² Units require 20 psig, [1.5 BAR], (150 kPa) for transducer and a separate supply for booster. A common supply of up to 110 psig, [7.7 BAR], (770 kPa) can be used provided the prefix Z147 is added to the original order, and the supply pressure is noted.
