- Single sign-on with ADFS, OAUTH2, SAML for added security
- Self-check in kiosk available
- Multi-factor authentication support
- SAFETY Act designated by Homeland Security
- Winner of Best New Product Award SIA/ISC West 2014

SV3® Cloud-Based Visitor Management System from Building Intelligence Inc. integrates with C•CURE 9000 Security and Event Management System for transparent data flow of visitor information. This allows you to pre-register visitors and track their entry and exit within your facility using one integrated system. Personnel records in C•CURE 9000 become user accounts in SV3 and visitor identities become personnel records in C•CURE 9000. The SV3 web interface provides a flexible configuration of clearances assigned to visitors based on host and location. Assign temporary credentials using your existing card technology (Prox, MIFARE, iCLASS, Smart Card, PIV, CAC; and any other formats supported by C•CURE 9000) or issue barcoded paper badges to allow visitors entry through turnstiles and doors.

SV3 offers the ability to schedule visitors, and supports registrations and scheduling of events from a desktop,

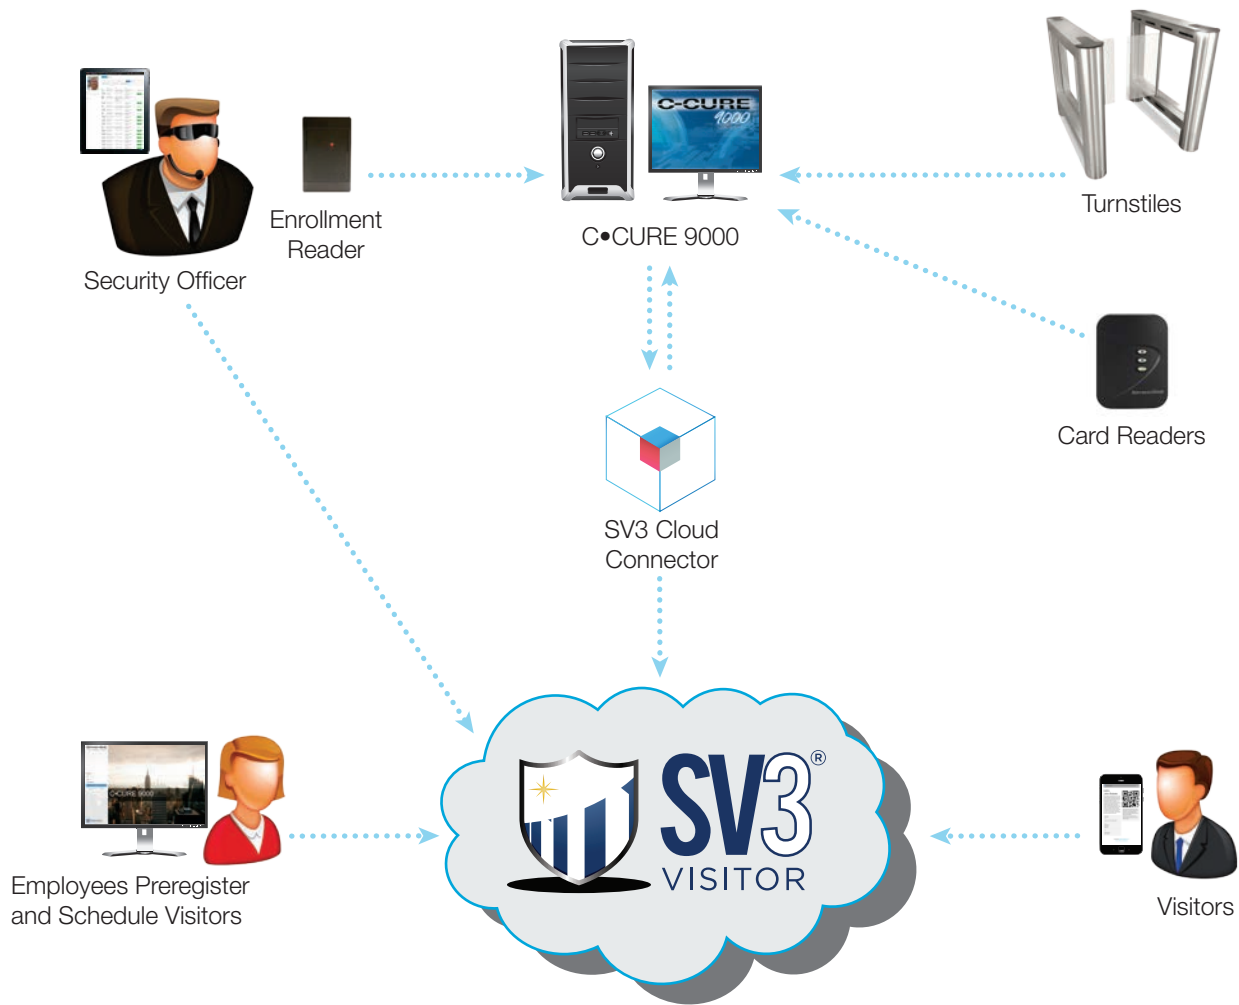

tablet, or mobile phone. This dynamic solution fits every environment from multi-tenanted office buildings and enterprise environments to small offices, government buildings, multi-purpose venues, and universities and schools.

Being a cloud-based solution, the SV3 Visitor Management System only requires a web browser, and can be used at any number of workstations with a simple per-user subscription. SV3 is simple to use and feature-rich, including a full range of reports, audit trail capabilities, single sign-on, and near infinite data retention capacity. A wide range of peripherals for document scanning and authenticity checking, badge printing, photo and signature capture are optional with this solution. A visitor can check in a manned or unmanned SV3 kiosk making the check-in experience seamless and efficient.

Integration Specifications

Network Communications . . . TCP Port 443, TCP Port 5671
Data Transit Security AS256 TLS 1.2, SSL/TLS
Visitor Retention History Unlimited
