NMS Key Management Solution

proxSafe Integration with C·CURE 9000

NMS
NEW MARKET SOLUTIONS

Features That Make a Difference:

- Manage physical key access to rooms, radios, weapons, vehicles, and other assets

- All events managed in C·CURE 9000 user interface

- Minimize the number of misplaced or lost keys and assets

- Reduces cost of deploying electronic access control on every door

- All activity logged in C·CURE 9000 journal

Manage Access to Physical Keys from C·CURE 9000
Maintain Key and Asset Visibility at All Times

proxSafe Key Management Solutions provide very effective security, especially when tightly integrated with the C·CURE 9000 access control system. The integration developed by New Market Solutions allows users to manage access to physical keys directly from the C·CURE 9000 user interface.

Security operators can easily assign access to assets such as weapons cabinets, vehicle keys, or specific rooms, based on C·CURE 9000 clearance assignments, and then closely monitor the whereabouts of those keys or assets through C·CURE 9000. All proxSafe events are reported in the C·CURE 9000 journal like any other hardware, giving operators a one-stop place to review important information related to lost or missing keys, in order to quickly mitigate any security concerns.

The integrated C·CURE 9000/ proxSafe Solution is an excellent way to strategically implement the most cost-effective security solution across an enterprise or small business.
